NOVEMBER 1974

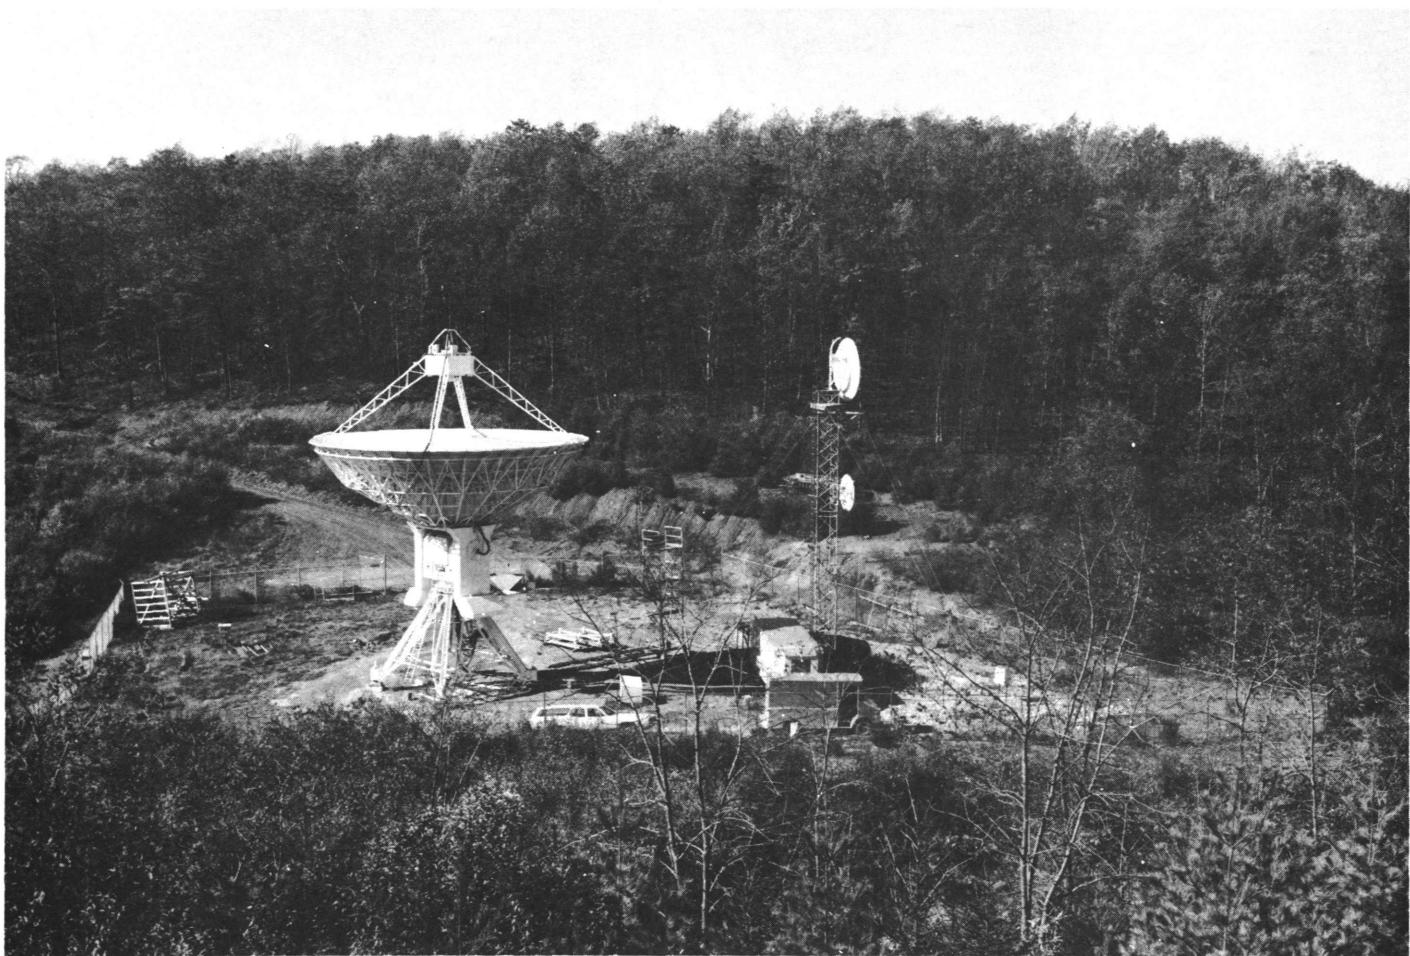

NUMBER OF COPIES: 150

NRAO 45-FOOT TELESCOPE
GENERAL INTEREST NOTES AND WEATHER STATION

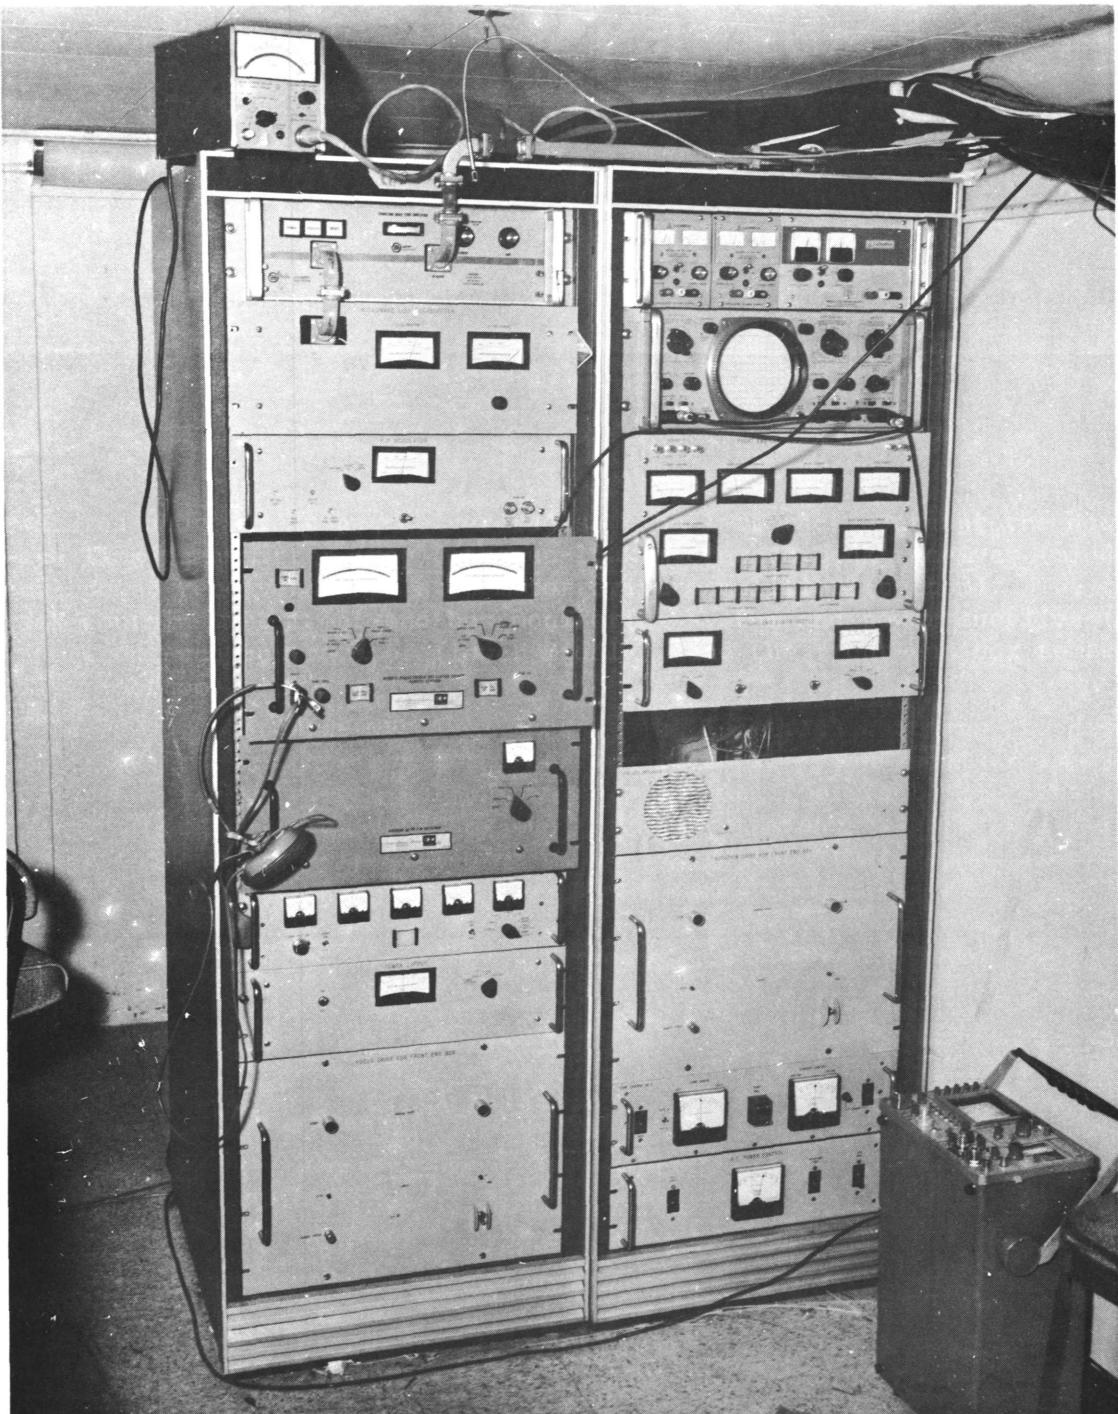

J. Ray Hallman

Introduction

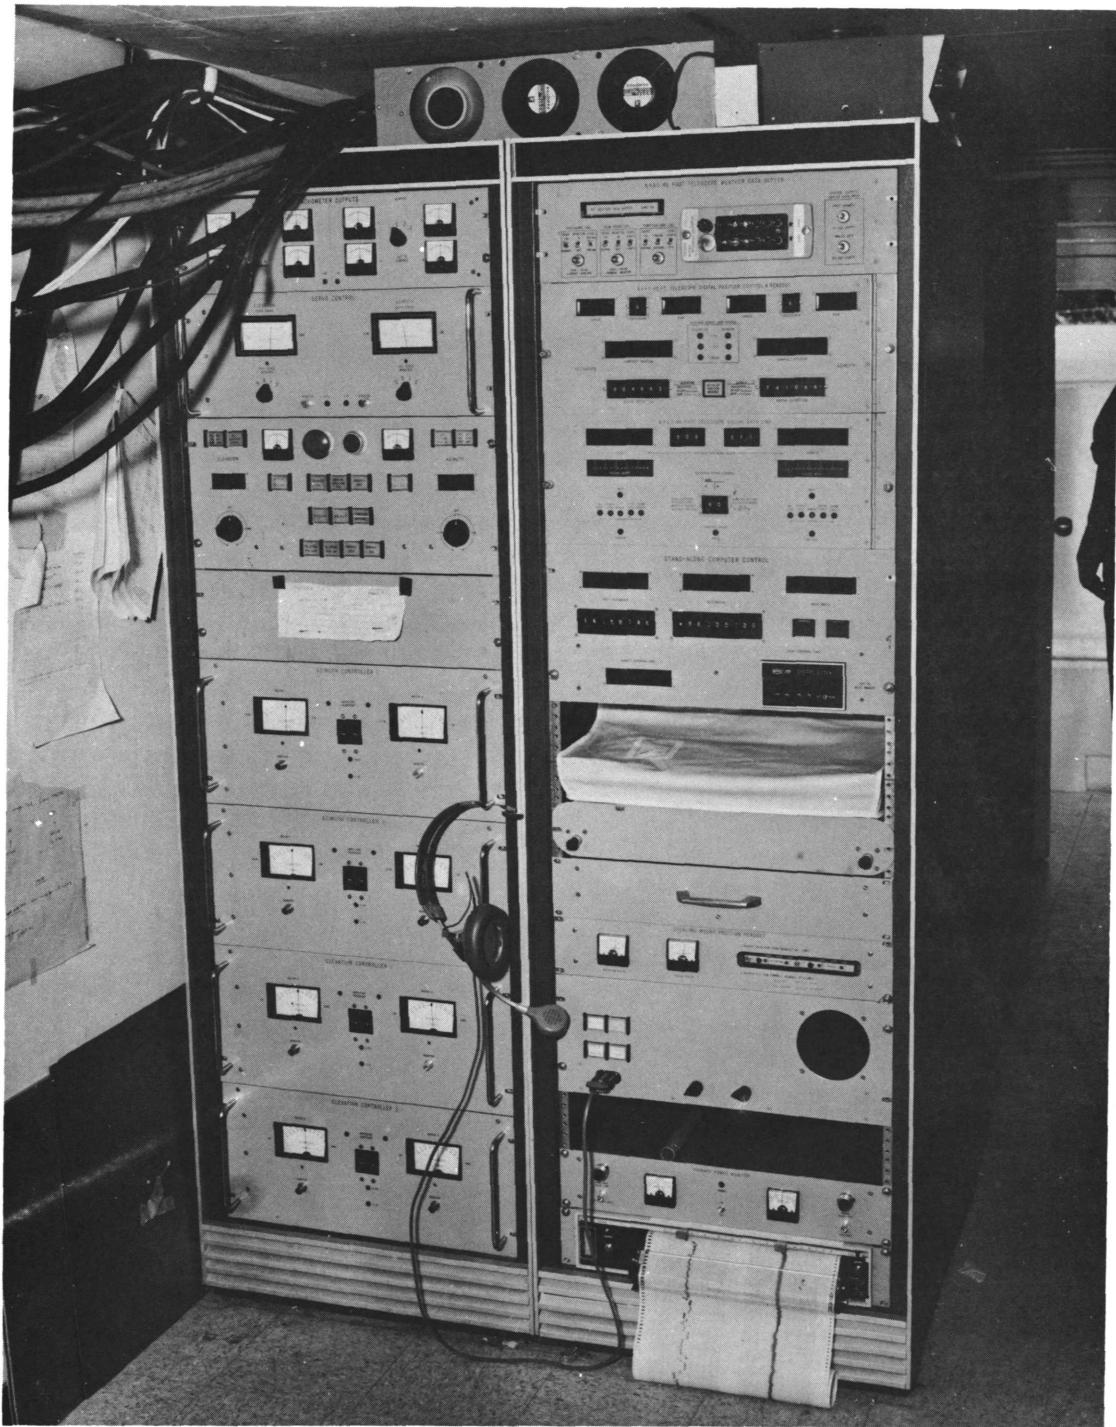

This Electronics Division internal report describes a new remote weather station telemetering facility associated with the NRAO 45-ft portable telescope. The paper also presents some interesting notes (mostly pictures) of the new NRAO 45-ft portable telescope which presently functions as a fourth element of the NRAO interferometer system.

The above picture shows the 45-ft telescope as it looks from an adjacent mountain peak at its location at the Hulterville site which is about 20 miles south of Green Bank.

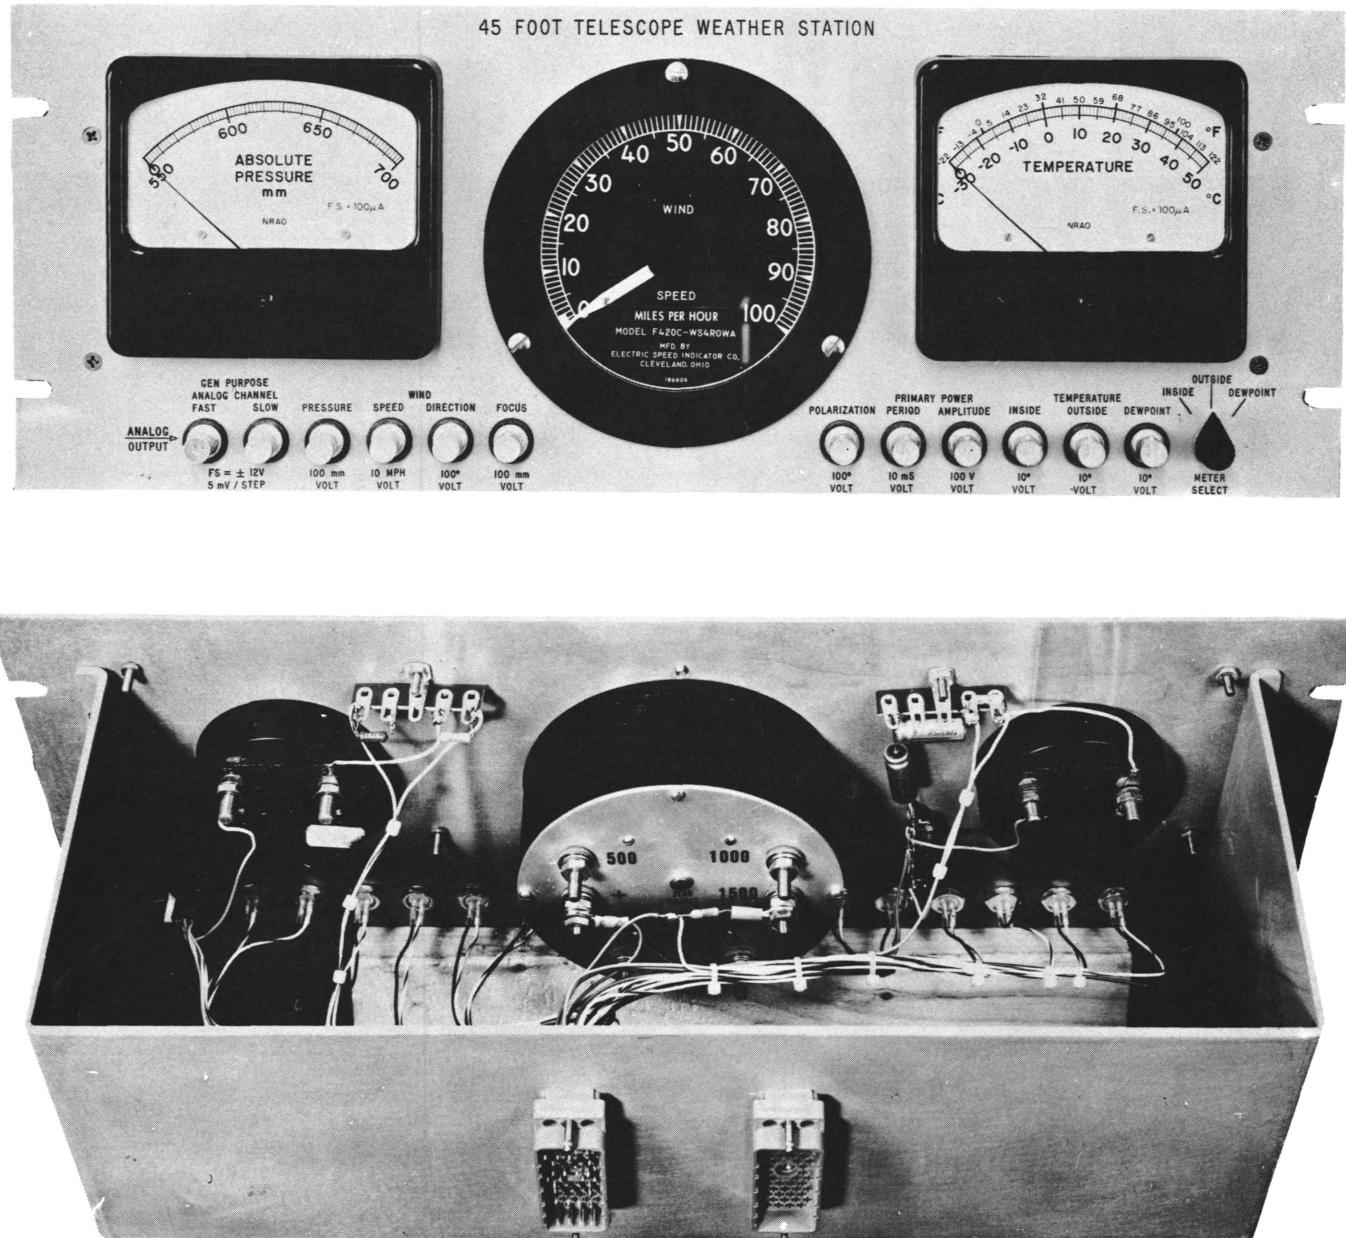

Pictured above are the receiver racks. The left rack contains the down-link microwave link transmitter (top), the up-link microwave link receiver (middle), and focal point receiver focus step motor driver amplifier (bottom). The right-hand rack contains the front-end box monitoring system and power supplies (upper half, the front-end box rotator (lower middle), and the front-end box temperature controller (bottom).

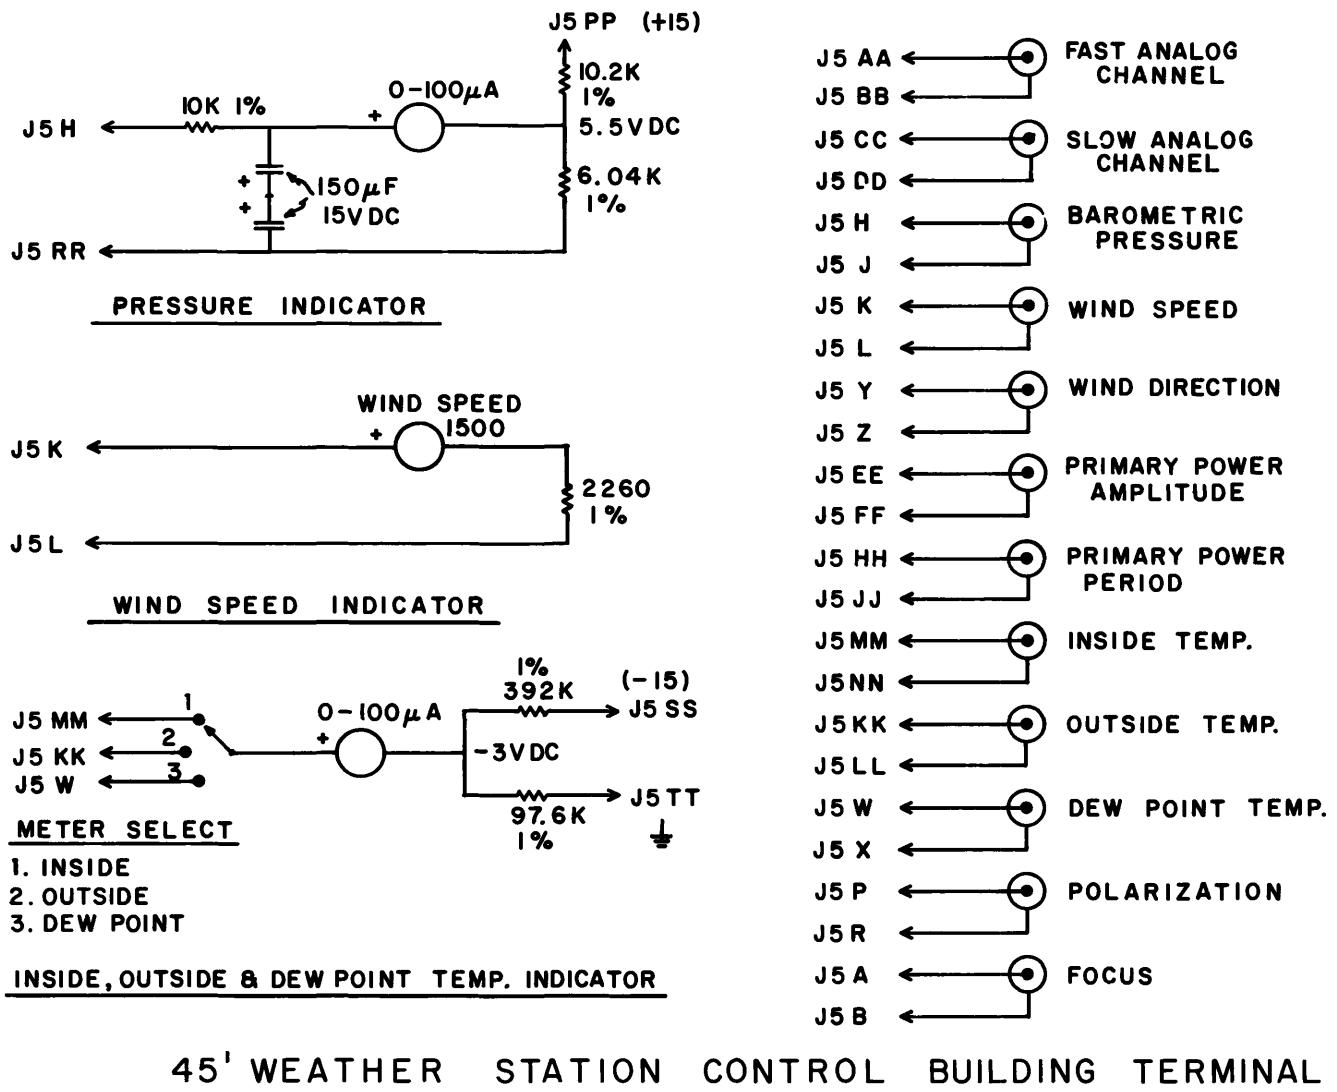

Pictured above are the telescope motion drive system rack on the left containing the servo system analog monitoring and control loops (top), operator's control panel (upper middle), and drive motor servo amplifiers (bottom). The right-hand rack contains the digital systems comprising from top to bottom: Remote weather monitoring station, digital position control and readout system, digital data link, stand-alone calculator control system, HP-9810 calculator, rotation and focus position readouts, communication system, space, primary power monitor, and chart recorder.

Weather Station

The remote weather station monitoring panel located at the interferometer control building, front and back views, are shown below:

The 45-ft weather station control building terminal electronic circuit is presented in the above drawing.

The following connector list shows all connections between the data link and weather station control building terminal via the J-5 cable.

Remote Weather Station Data Buffer 45-ft Terminal

Pictured below are front and back views of the weather data buffer:

NRAO 45 FOOT TELESCOPE WEATHER DATA BUFFER

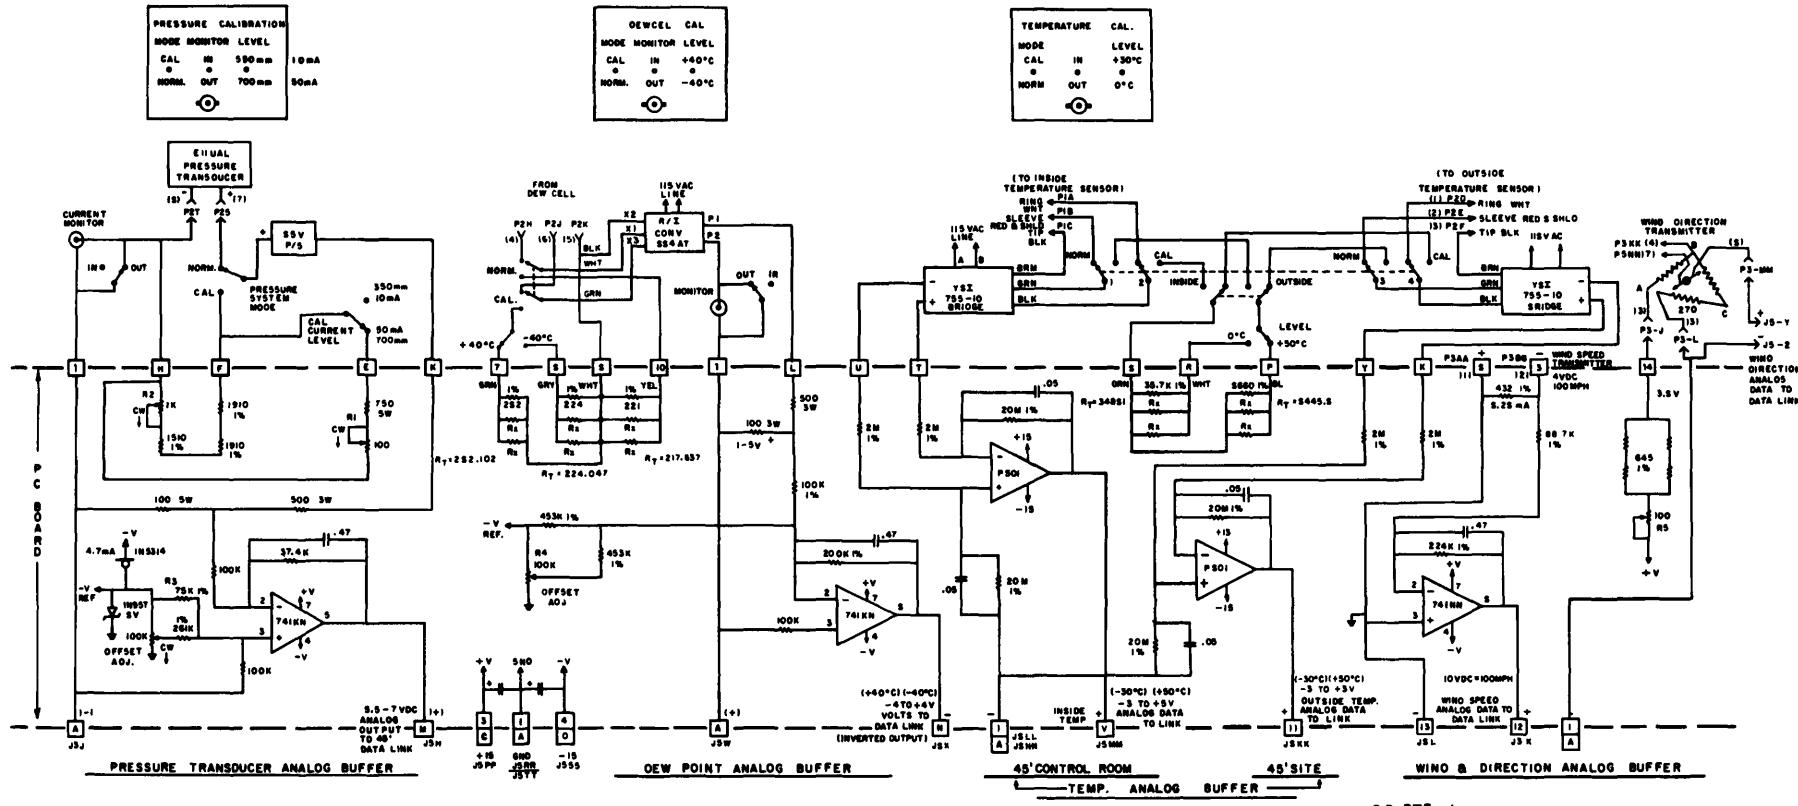

The weather instrument sensors are housed in the enclosure located out behind the 45-ft control trailer pictured below:

The schematic of the data buffer electronic circuits shown on the adjacent page shows the four basic sections. From left to right are the barometric pressure buffer, dew point buffer, inside temperature buffer, and outside temperature buffer. The analog data from the circuits is connected via cable J-5 to the data link system (DL45').

The connector lists are presented at the end.
