June 2, 1989

To: Lee King
From: Larry Walker
Subject: UAI Antenna Drawings

UAI sent one set of mylar reproducibles that were checked in on April 3, 1987. These 200 drawings are currently in four flat file drawers at the AOC in Socorro.

UAI sent five full sets of bluelines that were checked in on April 17, 1987. The locations of these 200 drawings is listed below:

- One set in AOC vertical file
- One set in AOC flat file
- One set to VLA Technical services at the drafting department c/o Dick Bailey
- One set to Pie Town site
- One set to VLA Control Building c/o Paul Rhodes (This set was shipped to Room #143 in the AOC at move time & has been restored for Lee King to take back to Charlottesville.)

The decision was made that the 200 sheet file set wasn't required for the (9) remaining sites. Jim Oty, Paul Rhodes & Bob Stidstone determined which drawings should be required at each site. This set of 85 drawings was sent out & nine sets of blueprints were run. The current locations of these sets is listed below:

- One set to Los Alamos Site c/o Paul Johnson
- One set to Ft. Davis Site (Harvard Observatory) c/o J. D. Williams
- One set to Owens Valley Site c/o Sid Smith
- One set to Kitt Peak Site c/o Dewey Ross
- One set to Brewster Site c/o Bob Sanderson
- One set to Hancock Site to remain in the possession of Boston University until at least the middle of August
- Three sets in Room #143 at the AOC
