PLEASE NOTE: THIS IS A CORRECTED MEMORANDUM

TO: Bud, Antonio, Jeff, and Bob
FROM: John Payne
SUBJECT: Quadrant Detector

I think we need to reinstall the quadrant detector with a FEDAL system interfaced to a PC. Tom should program the PC to read the quadrant detector outputs - say every ten minutes so that we can plot trends and try to correlate these with the pointing data. Maybe we could put the data in a Lotus file for easy plotting.

Let's try to install the system on 21st of **JUNE.**
