

Short Term Pipeline Priorities
 Jan. 20, 1984
 EBF

Priority Level	Task
10	Get reliable mapping from Sorter Visibilities
9	Get UVFITS working on Sorter spectral line visibilities
8	✓ Get UVFITS working on DEC-10 spectral line visibilities
9	Get PIPELN working very reliably
9	FITS: Default output as 16-bit integer maps
8	FITS: Problem with reference pixel location with AIPS
7	FITS: Need more flexibility in selecting a set of maps to be written
6	✓ Start using CLNMAP more
5	✓ UV sub of clean components during mapping
	DISPLY system priorities
7	✓ How to gently abort jobs running in DISPLY
7	TVLOD and CATLST. Decide on proper use of the parameter CHANNEL. Suggestion; change CHANNEL in TVLOD to PLANE.
8	BT displays: accessibility of antenna files in order to display baselines properly
7	BT map and CURVAL or TVVAL. Build a text file which contains flagging parameters for later use in Pipeline.
—6	Obvious map arithmetic
—6	Line-printer display of an image
—6	Contour plot of an image on TV and versatec
8	CHECK AIPS on 72 IF UVFITS sets →
