

NATIONAL RADIO ASTRONOMY OBSERVATORY  
Green Bank, West Virginia

December 12, 1983

TO: Coordinating Committee  
FROM: Buck Peery - Site Group  
SUBJECT: Space Requirements - Control Buildings

I would like to confirm my understanding of our agreement and discussions in the Design Review meeting in Charlottesville Nov. 8-10, 1983 and in previous and subsequent coordinating group meetings. That is: The chairman of all working and design groups designing or buying equipment or materials to be installed in the site control buildings or AOC will furnish the site group a physical description of the equipment by June 1984.

The description should include physical dimensions: width, length, height and estimated weight along with a suggested arrangement as it relates to other equipment. The information should include any requirements for cabling between pieces of equipment, power requirements (voltage, phase, and watts), cooling or other environmental requirements, and any special protection requirements physical or electrical.

The program submitted to NSF states we will contract with an Architect-Engineer (A/E) in May 1984. The A/E is to have preliminary site and building plans completed by December 1984. The A/E will need the above information before he can start the preliminary plans.
