

NATIONAL RADIO ASTRONOMY OBSERVATORY
Charlottesville, Virginia

June 9, 1983

MEMORANDUM

TO: VLBA Members

FROM: H. Hvatum

Attached is a suggested Table of Contents for the report.

Attachment

TABLE OF CONTENTS

CHAPTER I. CONFIGURATION

01 PRESENT PROPOSED CONFIGURATION

01.1 Location of Sites

01.2 Some Specifics on Each Site

01.2.1 Local support

01.2.2 How far can site be moved without affecting other sites? Some specific alternative.

01.2.3 Possible problems with site

01.3 Show How the Array Meets the Constraints Given in Earlier Documents

02 METHODS OF FINDING ARRAYS

02.1 Finding Basic Configuration from Constraints

02.2 Optimizing Using Quality Measures

02.2.1 Mutel and Gaume measure

02.2.2 Walker fast measure

02.2.3 Schwab and other measures

03 POSSIBLE ALTERNATIVE ARRAYS

03.1 An Array without Puerto Rico

03.2 U.S.-Canada Collaborative Array

03.3 13-14 Station U.S. Array Filling Hole to VLA

03.4 Southern Additions

03.4.1 Mexico

03.4.2 Equator

CHAPTER II. SITES

01 NUMBER OF SITES

02 GENERAL LOCATION OF SITES

03 REQUIREMENTS OF A TYPICAL RADIO TELESCOPE SITE

03.1 Land Area

03.2 Control Building

03.2.1 Functions

03.2.2 Area

03.2.3 Conceptual specification

03.3 Access

03.3.1 From distance

03.3.2 Local

03.4 Weather Conditions

03.5 Utilities

03.6 Protection from RFI

03.7 Terrain

03.8 Seismic History

04 CONCEPTUAL SITE PLAN FOR A TYPICAL RADIO TELESCOPE SITE

05 CONCEPTUAL FLOOR PLAN FOR A CONTROL BUILDING FOR A RADIO TELESCOPE

06 LOCATION OF THE OPERATIONS CENTER

07 REQUIREMENTS OF THE OPERATIONS CENTER

07.1 Functions

07.2 Area

- 07.3 Conceptual specification
- 07.4 Access
- 07.5 Utilities
- 08 CONCEPTUAL FLOOR PLAN FOR THE OPERATIONS CENTER
- 09 COST ESTIMATES
- 10 FUNDING SCHEDULES
- 11 DESIGN AND CONSTRUCTION SCHEDULES
- 12 SUGGESTED COST SAVINGS ON ALTERNATES

CHAPTER III. THE ANTENNA ELEMENTS - VLBA

- 01 OPERATIONAL REQUIREMENTS
 - 01.1 Size
 - 01.2 Observing Frequencies
 - 01.3 Sky Cover Required
 - 01.4 Observational Configuration
 - 01.5 Acceptable Limitations on Operational Availability (weather restrictions)
- 02 ANTENNA REQUIREMENTS AND SPECIFICATIONS
 - 02.1 Surface Accuracy and Reflector Deformation
 - 02.2 Pointing Accuracy Requirements
 - 02.3 Operational Wind Environment and Antenna Design
 - 02.4 Thermal Effects
 - 02.5 Antenna Speed Capabilities and Drive Design

03 ANTENNA CONFIGURATION STUDIES

03.1 Standard Yoke and Altitude Antenna

03.1.1 Reflector performance

03.1.2 Pointing error budget

03.1.3 Relative manufacturing and assembly costs

03.2 Wheel and Track Antenna--Standard Design

03.2.1 Reflector performance

03.2.2 Pointing error budget

03.2.3 Manufacturing and assembly costs

04 SITE WEATHER ENVIRONMENT IMPACT

04.1 Effect of Ice and Snow

04.2 Effect of Winds on Pointing Accuracy and Usable Frequency

05 COST ESTIMATES AND COMPARISONS

06 RECOMMENDATIONS ON CONFIGURATION AND DESIGN

CHAPTER IV. ELECTRONICS

01 THE ARRAY DESIGN

01.1 Feed Arrangement

01.2 Front-end Systems

01.3 Local Oscillator System and Phase Calibration

01.4 Control and Monitor System

01.5 Radio Link for VLA Area Antennas

02 COST ESTIMATES

02.1 Array Elements

- 02.1.1 Antenna Elements
- 02.1.2 Feed System
- 02.1.3 Front-end System
- 02.1.4 Hydrogen Maser
- 02.1.5 Control and Monitor System
- 02.1.6 Radio Link
- 02.2 Construction Plan
 - 02.2.1 Feed system
 - 02.2.2 Front-end system
 - 02.2.3 Local oscillator and phase calibration
 - 02.2.4 Control and monitor system
 - 02.2.5 Radio link
- 05 VLBA RECORDER/ACQUISITION SYSTEM REPORT
 - 05.1 Introduction
 - 05.2 I.F. Processing and Data Sampling
 - 05.3 Astronomy Data Packet Format and the Recorder Interface
 - 05.4 Recording System Specifications
 - 05.6 Longitudinal Recording System--MK III Moving Head--Status of Development
 - 05.7 Video Cassette Recording (VCR) System--Multiple Cassette Recorders--Status of Development
 - 05.8 Schedule for Development of the Recording Systems and Choice Between VCR and Upgraded MK III
 - 05.9 Construction Plan
 - 05.10 Cost Estimate of Development, Construction and Operation
 - 05.11 Delay Calibration System
 - 05.12 Members of the VLBA Recorder Study Group and Other Contributors to this Report

05.13 Cost of Special Features

05.14 Appendix--Detailed Cost Breakdowns

CHAPTER VI. COMPUTER

01 ELEMENT CONTROL COMPUTER

01.1 Philosophy and Scope

01.1.1 Kinds of control realized

01.1.2 When central control computer must Be used on line

01.1.3 Backup (redundant system)

02.1 Block Diagram and Hardware

02.2 Detail List of Tasks

02.3 Telescope Log File

02 COMMUNICATIONS

02.1 Use of Dedicated Four Wire Line

02.2 Multiplexer System and Specifications

02.3 Protocol Discussion

03 ARRAY CONTROL

03.1 Philosophy and Scope

03.2 Block Diagram and Hardware

03.3 Tasks

03.3.1 Telescope control and monitor

03.3.2 Communications

03.3.3 Displays

03.3.4 Real time fringe check

03.3.5 Observing program selection and array scheduling

- 03.3.6 Observation preparation
- 03.3.7 Bookkeeping
- 03.3.8 Tape inventory control
- 03.3.9 Parts inventory
- 03.3.10 Miscellaneous other utility programs

04 DATA PROCESSING

- 04.1 General
- 04.2 Architectural Overview
 - 04.2.1 Philosophy
 - 04.2.2 Hardware
 - 04.2.3 Software
- 04.3 Correlator Interface and Fringe Processing
 - 04.3.1 Scope and functions
 - 04.3.2 Block diagram
 - 04.3.3 Internal format
 - 04.3.4 Correlator log file
- 04.4 Post-Processing
 - 04.4.1 Data flow diagram
 - 04.4.2 Data base
 - 04.4.3 Use of AIPS
- 05.1 Special Considerations for Astrometry
- 06.1 Miscellaneous Computing Support

CHAPTER VII. VLBA CORRELATOR DEVELOPMENT

01 CORRELATOR HARDWARE INTERFACES

- 01.1 Data Playback Interface

- 01.1.1 Control
 - 01.1.2 Data
- 01.2 Data Output Interface
- 01.3 Operator Interface
- 01.4 VLBA LAN Interface
- 02 CORRELATOR OPERATING MODES
 - 02.1 Supported IF Modes
 - 02.2 Correlator Performance Requirements vs Mode
- 03 CORRELATOR ARCHITECTURE
 - 02.1 Building Blocks
 - 02.1.1 VLSI circuits
 - 02.1.2 Unit correlator
 - 02.1.3 Quad correlator
 - 03.1 Signal Routing
 - 04.1 Distributed Controllers and Communication
- 04 MAIN COMPUTER SYSTEM
 - 04.1 Hardware Specification
 - 04.1.1 Processor speed
 - 04.1.2 Main memory
 - 04.1.3 Input/output system
 - 04.2 Software Specification
 - 04.2.1 Functional requirements
 - 04.2.2 Languages and programming tools

05 ATTACHED PROCESSORS

05.1 Tape Control Subsystem

05.2 Interferometer Geometry Controller(s)

05.3 Fringe Processing Subsystem(s)

06 SCHEDULES

06.1 FY 1984 (Development and Prototype)

06.2 Construction

07 BUDGET PLAN

07.1 Overall Project Budget

07.2 FY 1984 Budget

08 ORGANIZATIONAL PLAN

08.1 Contractual Arrangements (Tentative)

08.2 FY 1984 Staffing

08.3 Construction Staffing

09 OPERATIONS PHASE

09.1 Staff

09.2 Budget
